

Installation

To install the framework is sufficient to perform the following simple steps:

- Download framework's files from the repository <https://hg.saritasa.com:6060/clickblocks.php> to the document root of the site.
- Placed at the beginning of your script the following code:

```
<?php  
  
require_once(__DIR__ . '/connect.php');
```

This assumes that your script is in the root of the site in the same place where the file **connect.php** If your script is located in a different directory, you will need to specify the correct path to the file **connect.php**
