General information

Inheritance	no
Subclasses	no
Interfaces	no
Source	Framework/utils/strings.php

Strings contains the set of static methods for simplifying the work with strings.

Public static methods

cut()

```
public static string cut(string $string, integer $length, boolean $word = true, boolean $stripTags = false, string $allowableTags
```

\$string	string	the given text to be reduced.
\$length	integer	length of the shortened text.
\$word	boolean	determines need to reduce the given text to the nearest word to the right.
\$stripTags	boolean	determines whether HTML and PHP tags will be deleted or not.
\$allowableTags	string	specifies tags which should not be stripped.

Cuts a large text. Example:

```
$text = '<b>Lorem Ipsum</b> is simply <i>dummy</i> text of the printing and typesetting industry.';
echo Strings::cut($text, 25) . PHP_EOL;
echo Strings::cut($text, 25, false) . PHP_EOL;
echo Strings::cut($text, 25, true, true) . PHP_EOL;
echo Strings::cut($text, 25, true, true, '<i>');
```

The above example will output:

```
<b>Lorem Ipsum</b> is simply...
<b>Lorem Ipsum</b> is...
Lorem Ipsum is simply dummy...
Lorem Ipsum is simply <i>dummy</i>...
```
