

Apache Configuration

ClickBlocks is initially ready to work with the default configuration of the web server Apache. In order to limit access to specific resources for an application you can use file **.htaccess** (which is located in the root directory of your web site):

```
RewriteEngine On

# restricts access to the configuration data, cache data and error logs.
RewriteRule ^/?Application/_config/?(.*)$ /controller.php
RewriteRule ^/?Temporary/_cache/?(.*)$ /controller.php
RewriteRule ^/?Temporary/_log/?(.*)$ /controller.php

# if the directory or file exists, then use them directly.
RewriteCond %{REQUEST_FILENAME} !-d
RewriteCond %{REQUEST_FILENAME} !-f

# otherwise redirect to controller.php
RewriteRule . /controller.php
DirectoryIndex /controller.php
```

If necessary, you can edit this file on your own.
