ClickBlocks\DB\SQLExpression

General information

Inheritance	no
Child classes	no
Interfaces	no
Source	Framework/db/core/sqlbuilder.php

SQLExpression is a wrapper of any SQL expressions. If you want some SQL expression won't be processed during query building you should use this class:

```
...
$sql = $builder->select('MyTable', '*')
               ->where(new SQLExpression('foo IS NOT NULL'))
               ->build();
// $sql will equal for MySQL engine:
// "SELECT * FROM `MyTable` WHERE foo IS NOT NULL"
```

Public non-static methods

__construct()

```
public void __construct(string $sql)
```

$sql	string	any SQL expression.

The class constructor.

__toString()

```
public string __toString()
```

Converts an object of this class to string.

Protected non-static properties

sql

```
protected string $sql = null
```

SQL expression.
